

DIKEH DANIEL

Frontend Engineer

Nigeria | +234 9163 912 943 | dikehaniel2020@gmail.com | [Portfolio](#) | [GitHub](#) | [LinkedIn](#)

SUMMARY

Frontend Engineer building production web applications with React, Next.js and TypeScript. Hands-on experience owning frontend features end to end, integrating APIs and authentication, working in reviewed codebases, and shipping through CI/CD. Strong independent project work across complex interactive interfaces, testing, performance, security and full-stack product development.

TECHNICAL SKILLS

Core: JavaScript (ES6+), TypeScript, HTML5, CSS3 | **Frontend:** React, Next.js, Zustand, React Query, Tailwind CSS | **Backend/Data:** Supabase, PostgreSQL, REST APIs, Auth, Row-Level Security | **Quality/Tools:** Vitest, Sentry, Git/GitHub, GitHub Actions, Vercel, Vite, Postman

EXPERIENCE

Frontend Developer Intern | DumosTech · Remote Oct 2025 – Jan 2026

- Owned frontend implementation of the Bumpit dating app admin panel from completed designs through API integration and deployment, covering dashboard, user/group management, moderation, payments, messaging, events, support and settings.
- Integrated authentication, authorization, dashboard metrics and module APIs with the backend, using Zustand for application state while working inside an established monorepo-style codebase.
- Worked through feature branches and pull requests with lead-engineer review; approved changes were merged into dev for testing and deployed through GitHub CI/CD pipelines to a VPS.

Frontend Developer Intern | TEFEM Network · Remote May 2023 – Oct 2023

- Built and launched the organization's responsive homepage from project requirements using HTML, CSS and JavaScript, incorporating team feedback across the development cycle.

SELECTED ENGINEERING PROJECTS

FaithScore — Music Notation Web App | React · TypeScript · Zustand · VexFlow · Tone.js · Supabase | [Live](#) · [GitHub](#)

- Designed and architected a dual staff/tonic-sol-fa notation editor, including a bidirectional conversion engine that preserves pitch, rhythm, ties, slurs, octave register and mid-score key changes across notation systems.
- Built reusable pitch, rhythm and position-mapping logic for conversion and mixed-notation rendering, alongside playback and complex score-editing workflows.

FaithLibrary — Digital Choir Score Platform | Next.js · TypeScript · Supabase · PostgreSQL · Vitest | [Live](#) · [GitHub](#)

- Built the full-stack platform solo with Supabase Auth, database-level Row-Level Security, file storage, role-based access, Sentry monitoring and Postgres full-text search using weighted tsvector + GIN indexing.
- Created a 68-test Vitest suite and improved PDF generation from typical 20–30 MB files to under 1 MB; added GitHub Actions checks for typecheck, lint, test and build before Vercel deployment.

EDUCATION

B.Sc. Microbiology, Nnamdi Azikiwe University, Anambra | 2020 – 2024
